# About project:-

As we are already aware of population of our country. We are most populated country in the world. According to the article of “THE HINDU”, only 8.15% of population is graduate(2015). This shows that most of the people are engaged in lower grade jobs.

Everyone is currently focusing only on that 8.15% graduates. The remaining working class people who are not graduates and serve as watchman, electrician, plumber, helper, labour, etc.

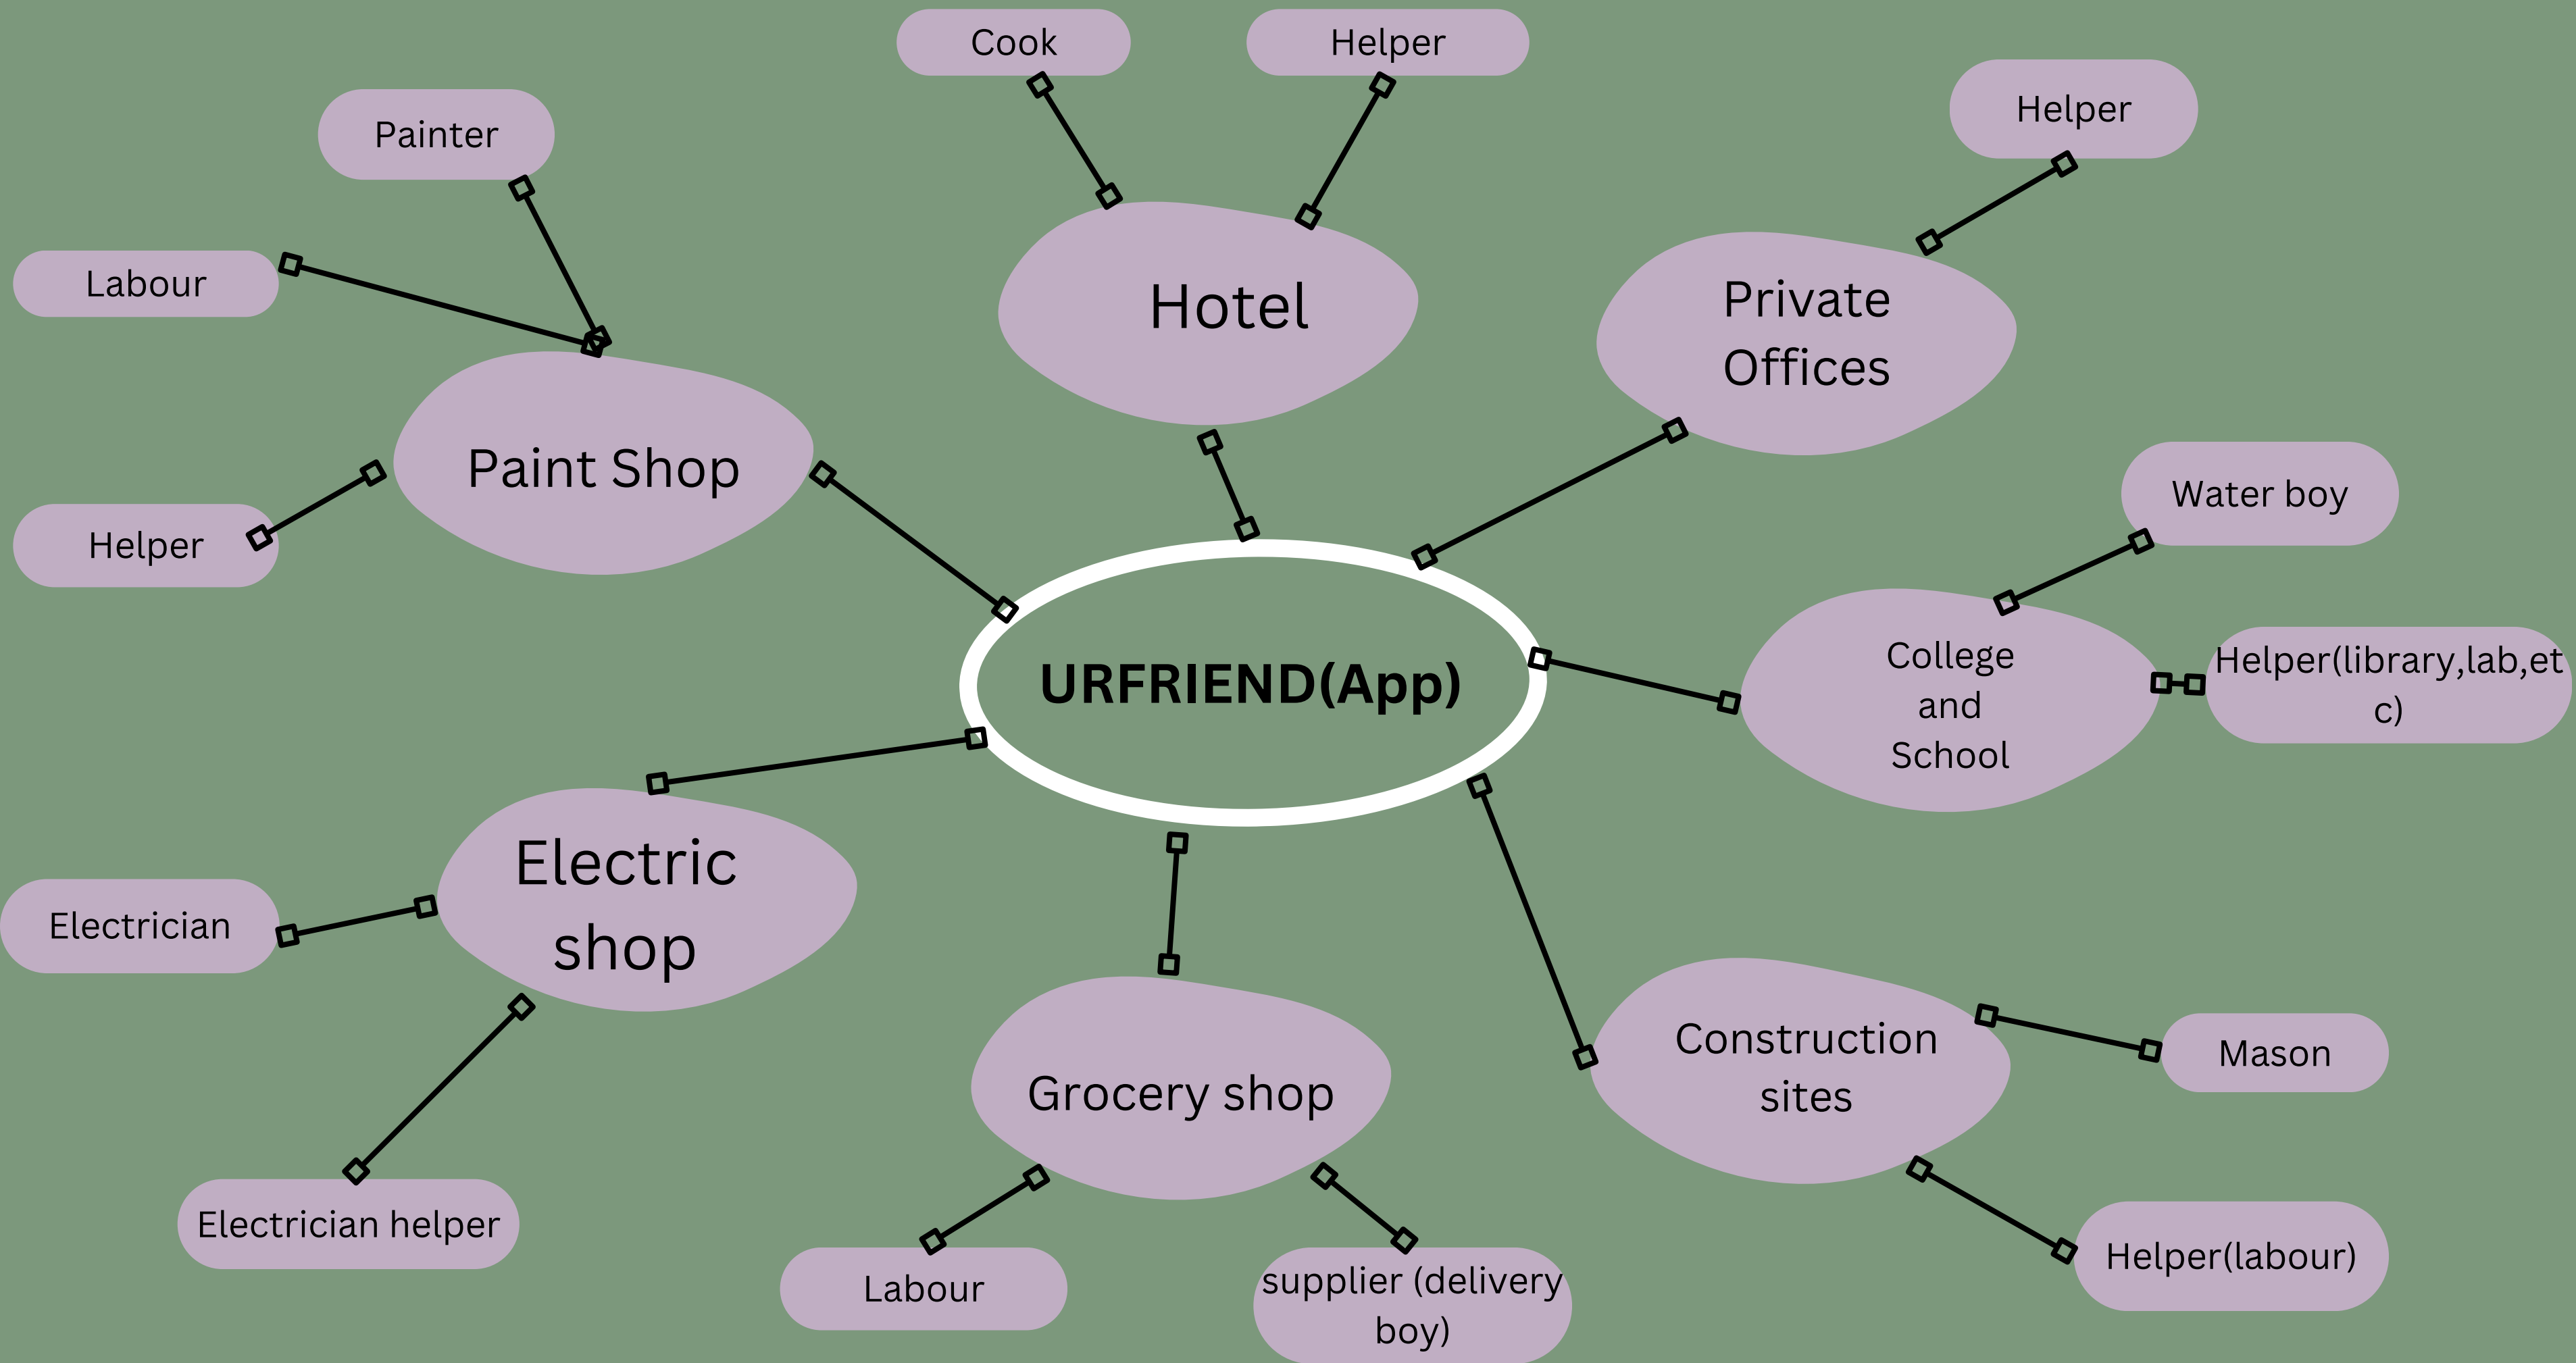

In this project, we will be doing for those remaining working class.

Curently, almost everyone has a smartphone. I want to make an app which will be providing oppurtunity to backward working class.

## **Features of Application**

- This app will basically provide service of giving different jobs to people.
- Work place of jobs will be located in the nearby them i.e. in their locality.
- Users can see the wages provided by the recruiter and duty time also.
- Through this app, any shop owner like electrician will be able to tell people that what service they are providing like complete wiring of a newly constructed houses with budget and the equipments they are going to use and people will have choice to either bargain with them and also time limit in which it has to be done.

- This app will help unemployed labours and helpers in finding suitable work in their locality.
- Shops like Paint shop, Furniture, Garage, etc. will be able to become member and through this they will be able to increase their own bussiness as well as increase employment rate.
- Will help in increasing employment rate of that area also.

Previous diagram shows us how different lower level jobs are interconnected with each other .

There are many more works which require lower level employees.

## **Advantages of URFRIEND**

- Will provide part-time employment also to those who belong from backward family so that they can study also independently.
- Will increase the employment for those who have no such great qualifications and skills so that they can work at Multinational Companies.
- Will also help in increasing local bussinesses.
- Will help to find easy jobs nearby them.

# Working

There will be three types of users of this application:-

- **Recruiter** : Those who need people to work and provide services like Electric Shop Owners, they will deal with the people who need services.
- **Job Seeker** : Those people who are in need of jobs.
- **User** : Those who want their jobs to be done like house owner who want to complete wiring job done.
